Oriental Poppies provide some of the most brilliant spring color for the perennial bed. Fall is the time to transplant these poppies; we are offering this fall a selection of three of the best and easiest grown varieties we know of. These are two year transplanted roots and they will bloom for you next spring.

WE OFFER THREE EXCELLENT VARIETIES

OLYMPIA—A truly outstanding poppy, rich and colorful. Flowers are of an immense size with double rows of narrow petals around a high center. Color is a very brilliant orange-red and by planting three or six in a clump, spacing plants about 12 to 16 inches apart, a real color mass is produced.

CHEERIO—Large flowering type with strong stems. Color is a most vivid salmon with irregular black blotches on petals. Very striking and beautiful when a clump of them are in bloom.

SALMON GLOW—Claimed by many to be the most beautiful of all Poppies. It is so large, so double and so brilliant that as the blooms develop they form into huge bright, orange-salmon balls. Unexcelled for creating spots of bright

JUNIPER EXCELSA STRICTA

(Spiny Greek Juniper) For a semi-dwarf pyramidal evergreen, Juniper Stricta cannot be surpassed. Foliage is a silvery blue, very compact and cedar-like. Reaches about 4 feet at maturity in our section of the country. Will get slightly larger in the South and not quite as large in northern sections. Excellent to use where height is a factor in planning a planting. We offer nice plants in 12- to 15-inch size at \$1.50 each; 2 for \$2.75.

GOLDEN ORIENTAL ARBOR-VITAE (Biota Aurea Nana)

A very slow growing, compact variety of the dwarf type. The flattened leaves face outward edgewise, presenting a beautiful surface of vertical fluted lines. Color is a fresh yellow-green, very striking in appearance and valuable in foreground planting. 12 to 15 inch size, \$1.50 each; 3 for \$4.00.

YEW

Without doubt the Yews are among the finest and most luxuriant evergreens grown. They are extremely hardy, easy to grow, do well in shade and harmonize with any other plant.

SPREADING YEW

The spreading variety throws out sweeping branches similar to Pfitzer Juniper. May be kept trimmed back to desired size or to fit allotted space. Foliage is a shade of deep green, soft to the touch and always fresh looking. May be kept sheared for a low hedge, allowed to grow its graceful wand-like branches for informal corner plantings or trimmed into compact shape for formal effects. After the plant is several years old numerous red berries are borne close to the branches, remaining into the winter. Well rooted, 12 to 15 inch, \$2.25 each; 2 or \$4.00.

UPRIGHT YEW

General foliage characteristics same as the spreading variety described above, but grows in columnar, erect form. By keeping the plant lightly sheared as it grows, the foliage will be extremely dense and compact from the ground up. Valuable for corner plantings and accent pieces. Does well in shade and seems to be very little affected by disease or pests. 15 to 18 inches, \$2.25 each; 2 for \$4.00.

HEMLOCK

Another splendid evergreen which does well in partially shaded spots is the Hemlock. It is one of the most graceful growing of plants. Foliage is a light fresh green which always looks well in any planting. Will grow to quite large size if left untrimmed; however, the plants should be kept lightly sheared as they develop, thus they will become much more beautiful and foliage will be dense and compact. When the desired height is reached the trees may be kept there by trimming back each year. We have a nice block of theme in 12 to 18 inch size at \$2.00 each; 2 for \$3.75.

Allow plenty of room for plants to grow and develop when planting evergreens. Keep from 1 1/2 to 3 feet away from foundation, according to type and variety. Plant spreading varieties at least 2 or 3 feet apart. Upright varieties, with spreading branches, should have at least 3 to 4 feet in all directions for growth. Of course, closely columnar sorts such as Juniper Fastigiata and Irish Juniper will not need more than 1 1/2 to 2 feet allowance, but all evergreens should have enough room for air to circulate freely around them. Most evergreen troubles can be traced to overcrowding in poor soil with insufficient water.

MUGHO PINE

Valuable for all low group plantings. Dwarf in habit, forming a low dome-shaped mound. Color a dark green except in early spring when the tender new growth of light green gives it a pretty two-color effect. 8 to 2 inches, \$1.25 each.

PYRAMID ARBOR-VITAE

For foundation or group planting in all landscape work. Retains the flat foliage and lovely bright green color at all seasons. Grows compact and develops naturally into perfect pyramidal form. May be sheared for strictly formal effects. 18 to 24 inch, \$1.50 each; 2 for \$2.75.

GLOBE ARBOR-VITAE

Grows densely compact in a dwarf, globular shape. Foliage is flat and deep green in color. Is much used for formal planting and for low, evergreen hedges as they lend themselves admirably to shearing. May also be grown in tubs for use at formal entrances. 10 to 12 inch, \$1.50 each; 2 for \$2.75.

2 yr., FIELD-GROWN PLANTS WHICH WILL BLOOM NEXT SUMMER

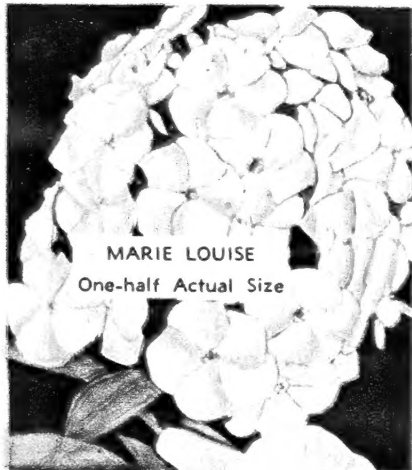

Colorful Large Flowering The Glory of the Garden

Perfectly Hardy — Easy to Grow — Profuse Bloomers

There are many varieties of Phlox. Some are good, some not. Many are not suited to all sections of the country. Some are promoted by various nurseries all out of proportion to their true worth. Krider's Phlox have stood the test of time and new varieties must have proven themselves before we will include them in our offerings.

We are one of America's Largest Growers of Hardy Phlox. The soil in Northern Indiana is ideal for their propagation and our plants grow, thrive and bloom in any part of the country.

Note our outstanding varieties and beautiful color range. Note also that this collection includes "Pinkette" and "Marie Louise," lovely new Phlox introduced only recently. We know you will love them when they bloom in your garden next summer. These plants all bloomed in our fields, and will bloom for you next summer and into the fall.

**Do Not Allow
Your Phlox to
Go to Seed**

Keep blooms cut as they fade. If you permit plants to go to seed they will drop hundreds of seeds right around the base of the plant. Next year masses of seedlings will spring up. These usually have the old magenta color and soon kill out your true variety. This soon makes the bed a mass of seedlings.

NOTE: This shrub cannot be sent into the States of California, Washington, Oregon, Colorado, Idaho, Montana, Nevada, Arizona, Utah.
